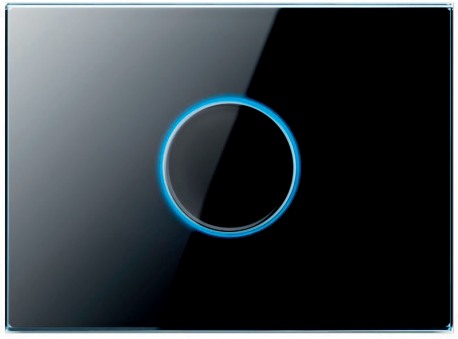
GUEST ROOM MANAGEMENT SYSTEM 2020

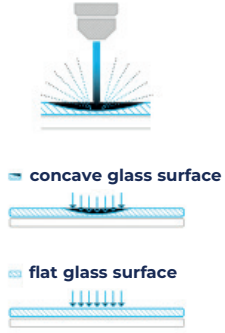
VITRUM

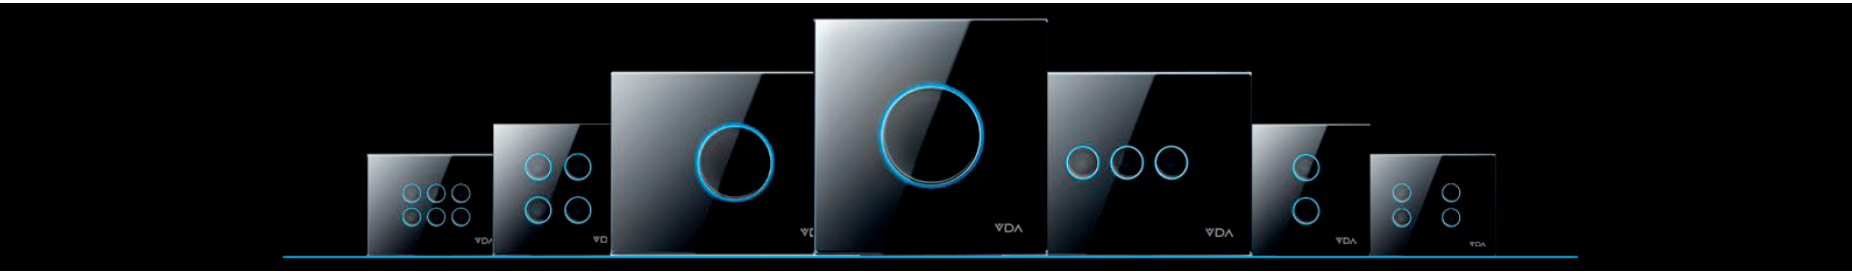
The Glass Collection

VITRUM

Vitrum is the line of Smart Devices designed using innovative methods and materials.
Use of an innovative as much as ancient material such as glass makes for a stimulating tactile perception and high profile sensorial impact.







VITRUM

Light, essential lines, luminosity and harmony, transform simple switches into items of design with an absolutely unique aesthetic and functional identity.
The design is exceptionally versatile and can be personalised with different colours, icons and screen prints.

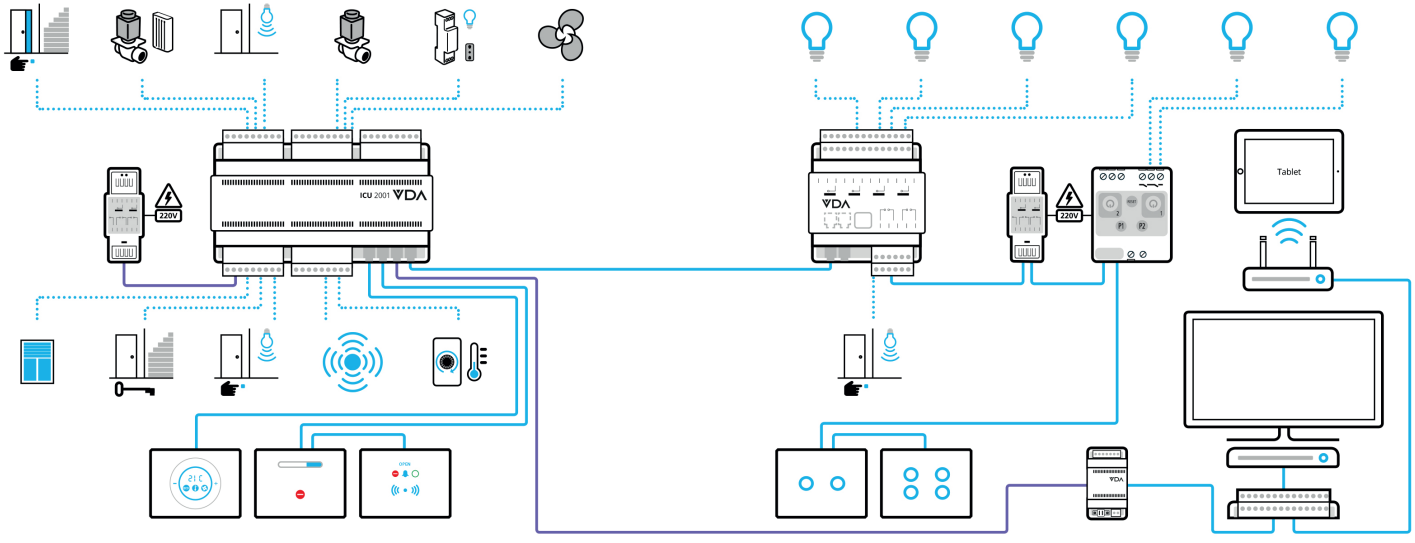
Controllers

MICROMASTER

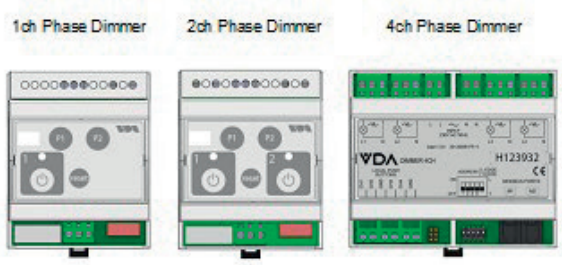
Our Micromaster system can be expanded and integrated with a wide catalogue of expansions and gateways to achieve any kind of integration with HVAC manufacturer, Lighting protocol or door lock systems.



Lights Control

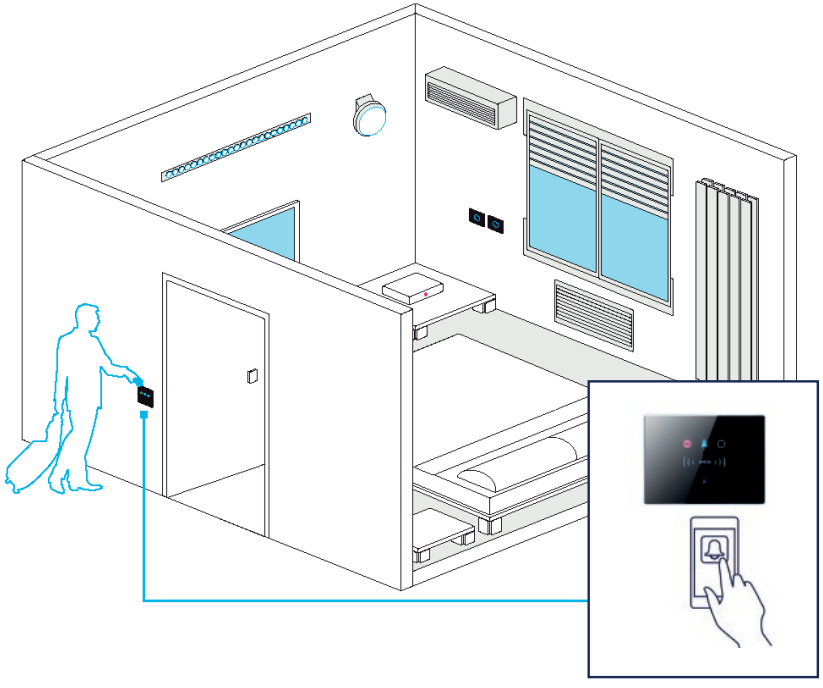
The VDA devices are able to control any kind of light, whether it requires a simple on / off control whether it is a dimmer mood control.
For solutions that avoids spotlights or strip LED, our series of PWM control devices allows you to avoid the use of expensive drivers lights.

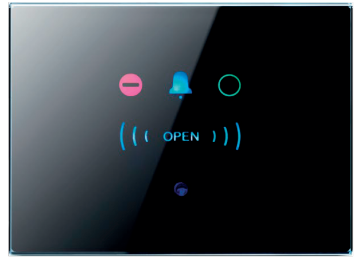
A series of gateways to **DMX and DALI protocols** is also available.

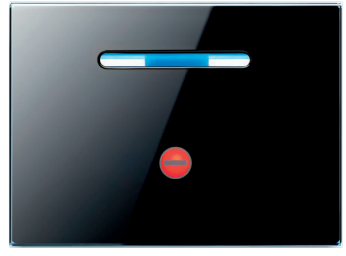


Access Control

The VDA online access system is an online system that guarantees maximum security and the ability to remotely **monitor** the presence of staff and guests at any time.



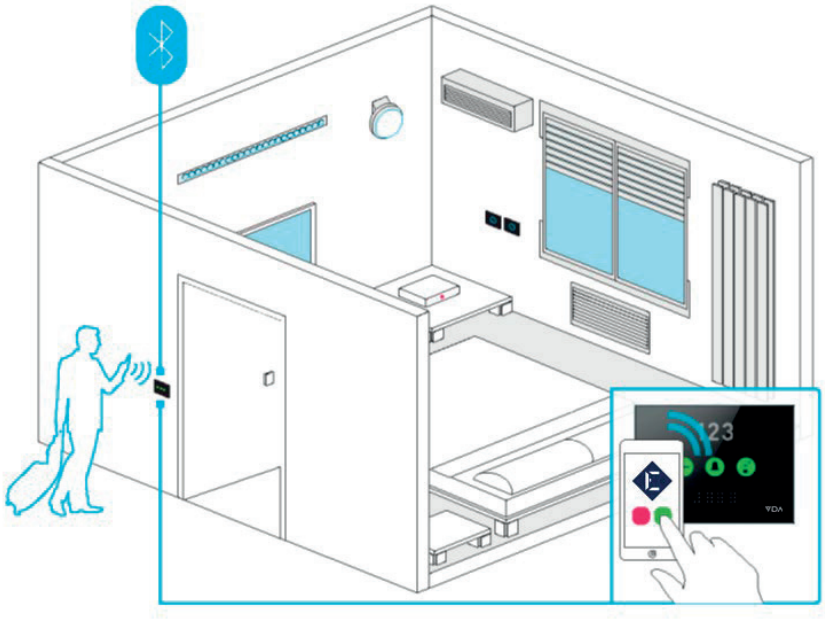




Every access is recorded on VDA's smart router that can provide a complete log of any key-card issued.

Access Control – App Enterplease

The latest generation technology for access control is the one that **combines** the traditional RFID key with a digital one using the Smartphone's **BLE (Bluetooth Low Energy) technology**.



ENTERPLEASE

EnterPlease is the app for both Apple & Android phones that allow the guest to access to his room and common areas avoiding the queues at the front desk.
